Specification

1. The abstract of the disclosure is objected to because it does not adequately describe the invention. Since the invention lies in the steering section as claimed in claim 35, the abstract should be amended to reflect this. Correction is required. See MPEP § 608.01(b).

Drawings

2. The drawings were received on November 25, 2003. These drawings (Figs. 22 and 23) are acceptable.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 35, 36 and 40-44 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1, 24, 27, 29 and 30 of U.S. Patent No. 6,699,179. Although the conflicting claims are not identical, they are not patentably distinct from each other because every element in the more generic claims of the application is covered

Art Unit: 3739

by the more specific patented claims. Thus the invention of claim 1 of the patent is in effect a “species” of the “generic” invention of claim 35. It has been held that the generic invention is “anticipated” by the “species”. See *In re Goodman*, 29 USPQ2d 2010 (Fed. Cir. 1993). Since claim 35 is anticipated by claim 1 of the patent, it is not patentably distinct from claim 1.

5. Claims 37-39 and 45-47 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1 and 30 of U.S. Patent No. 6,699,179 in view of Mitsumori (U.S. Pat. 6,409,658). The patented claims recite generic “linear actuators” (claim 30) but fail to claim any particular type or kind of linear actuator. The Examiner takes the position that it would be well within the level of ordinary skill in this art to use any linear actuator known at the time of the invention. Mitsumori evidences the level of ordinary skill by mentioning shape memory actuators, piezoelectric actuators and artificial muscles as known alternatives to a cable linear actuator (note col.2, lines 10-19). Since one of ordinary skill in this art would be aware of such linear actuators, it would have been obvious to have used them.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references cited on the attached PTO-892, except for Mitsumori ('658) were cited in the parent application 10/020,913.
